Title: NBC News Poll: National Election Day Voter Poll

Survey Organizations: NBC News

Field Dates: November 6, 1984

Sample: Exiting voters

Sample Size: 11671

Interview Modes: Mail questionnaire/Self-enumerated questionnaire

Weight Location: None

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

The information contained in this data set is from a poll conducted for purposes of election analysis in various states throughout the country. It was taken on November 6, 1984, when NBC News interviewed voters according to a systematic selection procedure throughout the entire voting day. Voters were interviewed with a self-administered questionnaire, after they had voted. Sample precincts were drawn in accordance with a probability sample design that gave all voters, as well as all areas within sampling units, a properly proportionate chance to be included. Stated in terms of a 95 percent confidence level, the estimated average sample tolerances of data from these surveys are plus or minus 3 percentage points for each of the state Election Day Voter Polls and plus or minus 2 percentage points for the National Election Day Voter Poll. That is, the chances are about 19 out of 20 that if the entire voting population of a given state or the nation had been surveyed with the same questionnaire, the results of each complete census would not be found to deviate from each poll's findings by more than 3 or 2 percentage points, respectively.
